Project Management North

Subject: Project Initiation Document (PID) Refresher

Background

The Project Scope Summary Report (PSSR) for the above-referenced project was approved on December 19, 2003 and was "refreshed" for cost in November 2007 to program in the 2008 State Highway Operation and Protection Program (SHOPP) but not programmed. This project has been "refreshed" for cost for programming in the 2012 SHOPP.

Date:

File:

Project Scope

This project proposes to replace bridge railing on Route 580 in Marin County at 2 locations:

- Location 1 Rte 580 at Sir Francis Drake Blvd OC-Bridge No. 27-0074
- Location 2: Rte 580 at Bellam Blvd UC-Bridge No. 27-0073L

Preliminary Project Cost Estimate

- Current project cost estimate is \$1.75M
- RTL cost in January 2015 is \$ 1.99M;
- Mid-year construction cost in August 2015 is \$ 2.04M.
- District 04 recommended escalation rate of 4% was used for all escalation computations, with 25% contingency.

Attachments:

- **Updated Project Schedule (1)**
- **(2)** Updated Preliminary Project Cost Estimate
- (3) **Updated Support Cost Estimate**
- Updated Right of Way Data Sheet (4)
- Updated Advance Planning Studies (APS) (5)
- (6)Transportation Management Plan
- Updated Preliminary Environmental Analysis Report (PEAR) **(7)**
- Updated Storm Water Data Report (SWDR) (8)

REVISED PROJECT SCHEDULE

This revised project schedule is based on the assumption that the project will be programmed in the 2012 SHOPP which would typically set the PA&ED Phase to begin in July 2012.

4.	Are there any major items of construction contract work? Yes ☐ No ☒ (If yes, explain)
5.	Provide a general description of the right of way and excess lands required (zoning, use, major improvements, critical or sensitive parcels, etc.). No right of way required
	All work is within existing right of way.
6.	Is there an effect on assessed valuation? Yes ☐ Not Significant ☐ No ☒ (If yes, explain)
7.	Are utility facilities or rights of way affected? Yes ⊠ No □ (If yes, attach Utility Information Sheet Exhibit 01-01-05)
8.	Are railroad facilities or rights of way affected? Yes ☐ No ☒ (If yes, attach Railroad Information Sheet Exhibit 01-01-06)
9.	Were any previously unidentified sites with hazardous waste and/or material found? Yes ☐ None evident ☒ (If yes, attach memorandum per Procedural Handbook Volume 1, Section 101.011)
10.	Are RAP displacements required? Yes No (If yes, provide the following information)
	No. of single family No. of business/non profit
	No. of multi-family No. of farms
	Based on Draft/Final Relocation Impact Statement/Study dated, it is anticipated that sufficient replacement housing (will/will not) be available without Last Resort Housing.
11.	Are there material borrow and/or disposal sites required? Yes \(\square\) No \(\square\) (If yes, explain)
12.	Are there potential relinquishments and/or abandonments? Yes ☐ No ☒ (If yes, explain)
13.	Are there any existing and/or potential Airspace sites? Yes ☐ No ☒ (If yes, explain)

Exhibit 01-01-01 EA: 1A300K (04) Page 3 of 5

14.	Indicate the anticipated Right of Way schedule and lead time requirements. (Discuss if District proposes less that PMCS lead time and/or if significant pressures for project advancement are anticipated.)
	PYPSCAN lead time (from Regular R/W to project certification) months
15.	Is it anticipated that all Right of Way work be performed by CALTRANS staff? Yes ☑ No ☐ (If no, discuss)

Exhibit 01-01-01 EA: 1A300K (04) Page 4 of 5

Assumptions and Limiting Conditions

- This data sheet was completed without a hazardous waste/materials report.
- Information on this data sheet was based on maps provided by Robert Blanco on August 18, 2011.

I have personally reviewed this Right of Way Data Sheet and all supporting information. It is my opinion that the probable Highest and Best Use, estimated values, escalation rates, and assumptions are reasonable and proper subject to the limiting conditions set forth, and find this Data Sheet complete and current.

Project Description

Purpose and Need

The project is to replace bridge rails at two locations on Route 580 in Marin County for programming in the 2012 SHOPP. The original PSSR was approved in 2003, and was refreshed for cost in 2007 for programming in 2008 SHOPP.

Description of work

This project will replace existing reinforced concrete baluster bridge rails with the latest standard bridge rails in Marin County on Route 101. Updated bridge rails will be concrete barriers, Type 732, and Type 80, which provide enhanced ability to prevent an errant vehicle from leaving the structure and reduce the severity potential crashes.

Alternatives

Build alternative is described above. If this project is not complete, the existing non-standard bridge rails will remain as is.

PEAR Technical Summaries

Visual/Aesthetics:

BCDC requested the use of Type 80 railing on Corte Madera Creek mainline to enhance motorist's view of the scenery.

Water Quality and Storm Water Runoff:

Construction will adhere to the Department Statewide National Pollutant Discharge Elimination System (NPDES) Permit. To comply with this permit, a Water Pollution Control Program (WPCP) must be developed and implemented, per Standard Special Provision (SSP) 07-340. Pursuent to the Department Stormwater Management Plan (SWMP), temporary and permanent Best Management Practices (BMPs) shall be considered and incorporated, as necessary, using Best Available Technology (BAT) to the Maximum Extent Practicable (MEP). Such BMPs are recommended, in order to minimize, or prevent, any potential increased impact to existing water quality.

Cultural Resources:

In term of archaeology, there is a low sensitivity because no ground disturbing activities will occur. A record search will be required to ensure no historic properties will be affected. The project may be screenable under Section 106 PA, as all bridges are Category 5 in Bridge Inventory (not historic properties).

Hazardous Waste/Materials:

Initial Site Assessment will include special provision (SSP 15-300) for asbestos in yellow traffic stripe. Concrete rails on both bridges must be tested for asbestos.

Biological Environment:

The habitat for the project sites is Highway 580, which is a very heavily traveled, 6-lane divided highway.

Potential impacts of the bridge rail replacement project on biological conditions along SR-101, in Marin County, were assessed by Steven Harris, Caltrans Biologist on 7-9 September 2011. Mr. Harris reviewed the project design, biological surveys, CNDDB, aerial photography, and maps of State and Federally Listed Species to determine potential project impacts on listed species, wetland, waters of the State, and waters of the U.S.

The California Department of Fish and Game (CDFG) California Natural Diversity Database (CNDDB) and the U.S. Fish and Wildlife Service (USFWS) list threatened/endangered species that have the potential to occur in the San Quentin, San Francisco North, San Rafael, and Point Bonita U.S. Geological Survey (USGS) Quadrangles, which cover the project area. However, the highly disturbed and urban locations of this project make it unlikely that the project will impact any T/E species.

Biological Resources

Birds:

Compliance with the Migratory Bird Treaty Act (MBTA) regarding nesting birds will be required. Surveys for migratory birds that may be nesting under project the bridges may be required. Exclusionary netting and limiting the construction timeframe to avoid nesting season (February 15 to September 1) may be required. If an active bird nest with eggs is found, the nests must be monitored before and during the construction period to ensure that the birds are not disturbed. Project work will occur within the paved roadway; therefore, biological impacts are expected to be minimal.

Fisheries:

The project site close to wetlands, streams, and ditches. Salmon species are not found in the area around the project site.

Regardless of the presence of special status species in the area, full attention and effort should be given to BMP's to prevent sediments from running off the project site and any stream and ditches in the region.

Mammals

Mice:

The salt-marsh harvest mouse (*Reithrodontomys raviventris*), Federally and California listed as endangered, has been observed in the project area. Therefore, full attention and effort should be given to BMP's to prevent sediments from running off the project site and potentially impacting marsh land and any stream and ditches in the region.

Bats:

pallid bats (Antrozous pallidus), California species of concern, has been observed in the project area. Surveys for any bats roosting under the bridges may be required. If an active bat roost is found, the roost must be monitored before and during the construction period to ensure that the bats are not disturbed. Project work will occur within the paved roadway; therefore, biological impacts are expected to be minimal.

Plants:

The highly disturbed and urban locations of this project make it unlikely that the project will impact any T/E plants species.

Physical Resources

Waters/Wetlands:

The project site is adjacent to wetlands, streams, and ditches. In the event that equipment staging could affect the potential wetland located near the project site, ESA fencing would be needed to keep project activities and materials out of this area. Potential wetland may need to be delineated to determine whether is under the US Army Corps of Engineers (USACOE) jurisdiction.

Permits

Full attention and effort should be given to preventing and sediments from running off the project site and entering Waters of the U.S. Release of sediments from the project site may require USACE's 404 Nationwide Permit, the California Department of Fish and Game's 1602 Agreement, and the U.S. Fish and Wildlife's Biological Opinion. In addition, a Clean Water Act Section 401 Water Quality Certification Permit from the Regional Water Quality Control Board may be required.

Mitigation

The project requires implementation of standard Caltrans erosion control, housekeeping, spill prevention, and Best Management Practices (BMP's). In addition, the project may require fencing of Environmentally Sensitive Area's (ESA) to prevent impacts to off-site resources.

Disclaimer

This Preliminary Environmental Analysis Report (PEAR) provides information to support programming of the proposed project. It is not an environmental determination or document. Preliminary analysis, determinations, and estimates of mitigation costs are based on the project description provided in the Project Scope Summary Report (PSSR). The estimates and conclusions in the PEAR are approximate and are based on cursory analyses of probable effects. A reevaluation of the PEAR will be needed for changes in project scope or alternatives, or in environmental laws, regulations, or guidelines.

Review and Approval

I confirm that environmental cost, scope, and schedule have been satisfactorily completed and that the PEAR meets all Caltrans requirements. Also, if the project is scoped as a routine EA, complex EA, or EIS, I verify that the HQ DEA Coordinator has concurred in the Class of Action.

1. Project Description

This project will replace the existing concrete guardrails at two bridges, Sir Francis Drake Boulevard Overcrossing and Bellam Boulevard Undercrossing. The two bridges were built in 1957 and 1959, respectively and have non-standard reinforced concrete baluster rails. The existing rails could fail to keep an errant vehicle from leaving the bridge structure in the event of a collision.

The existing concrete curb and barrier are to be removed and replaced with a Concrete Barrier Type 732. The type 732 barrier is stronger and taller than the existing barrier and should be able to withstand a vehicular impact.

Asbestos containing components might be present in the bridge components.

The project will disturb 0.01 acres of soil and involve the demolition of Portland Cement Concrete (PCC) and laying of new PCC. There will be no added impervious area and no reworked soil area.

The project lies in Hydrological Sub Area (HSA) 203.20 and drains into the San Francisco Bay, Central.

2. Construction Site BMPs

A WPCP will be used since the project disturbs less than an acre of soil. Other Construction Site BMPs are being considered such as portable concrete washout and street sweeping. Caltrans will decide in the PS&E phase which Construction Site BMPs will be included as separate bid line items.

Memorandum

Flex your power! Be energy efficient!

To:

NORMAN GONSALVES

District Storm Water Coordinator

Office of Water Quality

Date: February 7, 2011

File:

DEPARTMENT OF TRANSPORTATION - District 4

Office of Construction Environmental Engineering Support

Subject: Division of Construction Concurrence with Storm Water Data Reports for WPCP Projects

This memo provides concurrence with your office's determination on Storm Water Data Reports for those projects that only require a Water Pollution Control Program (WPCP). However, WPCP projects that are located in environmentally sensitive areas or over a water body will still require review by my office.

The Office of Construction Environmental Engineering Support will review and provide input to all projects requiring a Storm Water Pollution Prevention Plan (SWPPP). Please ensure that adequate review time is provided for each of these projects.

If you have any comments or questions regarding this concurrence, please contact me at (510) 867-6007.

Thank You.

DRAGOMIR BOGDANIĆ, PE

Senior Transportation Engineer

Dist 4 Construction Storm Water Coordinator
